

My medium username is: Ashly Felix C

The article I chose is "Top 15 SQL Coding Interview Questions"

As I went through the question, I became more confident in my SQL skills and can comfortably tackle common SQL interview questions like those found in the *Top 15 SQL Coding Interview Questions* article on Medium. I'd estimate my confidence level at around 80% since I've learned and practiced these concepts before. My knowledge covers essential SQL techniques, such as using subqueries and LIMIT with OFFSET to find the second-highest salary, calculating averages with AVG(), identifying duplicates with GROUP BY and HAVING COUNT(*) > 1, and retrieving random records with ORDER BY RANDOM(). Computing percentages using SUM() in a subquery, selecting the most recent records with MAX(date_column), and calculating moving averages using window functions. While I'm confident in applying these concepts, I continue to refine my skills to enhance my problem-solving abilities.
